

Quoi ?

```
def f(p,q):  
    assert(type(p) is int)  
    assert(type(q) is int)  
    assert(p > 0 and q > 0)  
    while p != q:  
        if p > q: p = p - q  
        else: q = q - p  
    d = p  
    return d
```

Comment ?
